FUNDING PROPOSAL

ARISE KAPUMPE

Solution Overview

Mission Geeks is proposing to install a solar system to supply the teachers and team leader offices. This will be a stand-alone system that will have separate plugs and lights to enable national grid power to be utilized separately when it is operational. Mission Geeks' initial task will be advising on a suitable set-up; made up of an inverter, lithium batteries and solar panels. After this Mission Geeks will oversee the installation of this system and the running of separate plugs and lighting systems.

Our recommendation for the internet connectivity aspect is to initially install a Starlink internet system. This will then be best distributed around site using the Ubiquiti mesh system which also allows strict control of users and content accessibility. This Ubiquiti system allows control of websites and apps on the system and allows Mission Geeks to provide remote support.
